

# Questions and answers of Islamic Jurisprudence

1401.12.22

---

QASR Language

Machine Learning System Design - Course Project

# Overview

Religious rules and regulations related to human duties are known as "Islamic Jurisprudence". Islamic jurisprudence is divided into two types of obligations and situational rulings. Obligatory rulings directly express human duties, such as the obligation to pray or the prohibition of drinking alcohol. Situational rulings are indirectly related to human duties, such as the ruling that prayer in impure clothing is invalid. In this project, we aim to design a system that can answer any question in this field from a set of previously asked questions or refer the user to a relevant source.

## Goals

1. Identifying the relevant field of the question
2. Answer to the question

## Specifications

### Requirements

In this project, we need suitable data for question and answer. To collect data, we need to crawl relevant websites. We also need to deploy the model on a server so that we can use the model.

### Objectives

One of the most important goals of the project is to reduce costs related to human resources, improve the quality of response and provide 24-hour support, immediate response and create a comfortable space for questions and answers.

### Constraints

Deficiency data source for train models

### Features

Understanding complex conversations and attempting to provide relevant responses,

sentiment analysis to better respond, learning user behavior, and personalizing conversations.
